

The Rx Development Solution!

Dispensing for
Workers Compensation
and Personal Injury

Letter of Introduction

Dear Rx Development Partners,

Thank you for partnering with Rx Development to better serve patients and providers with their medication needs. It is our goal to utilize our Advanced CRM Technology to give you all the support and tools necessary to streamline the implementation of a medication dispensary to service patients injured at work or in an accident.

We are very excited about this program and appreciate the opportunity to work with you.

Sincerely,

Rx Development, Inc.

Overview

Rx Development, a professional medication dispensing management company, assists doctors in implementing an all-inclusive point-of-care pharmaceutical program that delivers lasting results while improving billing and collections. Acting as a liaison between the Workers' Compensation carrier, adjuster, case manager, employer, and physician, Rx Development's steadfast commitment is second to none. From introducing doctors to reputable pharmaceutical suppliers to furnishing all the necessary office equipment to streamline in-office medication dispensing, Rx Development applies decades of management solution knowledge to individual practice requirements.

Advantages to your practice and patients

THE RX DEVELOPMENT SOLUTION INCREASES PATIENT COMPLIANCE AND SATISFACTION at the same time. You can expect almost 100% compliance as patients leave your office with their medications in hand, and you will eliminate possible dispensing mistakes by the pharmacy at the same time. Your patients will appreciate the convenience, and your practice will enjoy added value.

Patient Convenience

Point-of-care dispensing increases patient convenience. Most patients prefer to receive their medications during an office visit rather than having to drive to a pharmacy and wait in long lines for the same medications.

Patient Compliance

Research suggests that just 60% of doctor prescriptions are filled when the patient uses a traditional pharmacy. Patient compliance is closer to 100% with point-of-care dispensing.

Practice Differentiation

Physician practices can set themselves apart from other practices and drugstores by offering point-of-care medication.

Value Added Service

Point of care dispensing adds value to a practice not only by increasing patient convenience and satisfaction, but by the generation of additional revenue.

Reduced Workload & Time

By having medications on-site, practices are able to reduce the number of calls they make and receive from pharmacies.

Physical Dispensary Requirements

The physical requirements for your dispensary are minimal. Most practices have a space which meets the requirements.

1. Lockable cabinet (Locks may be added to existing cabinets)
2. Windows computer
3. Laser or inkjet printer

DISPENSING ROADMAP

01

REQUIRED DOCUMENTATION

- Medical License
- DEA Certificate
- Identify Formulary of Rx products to be dispensed
- Contract
- W-9
- State License of primary physician
- Re-packager paperwork
